- Opens stay lifts with a light touch on the front
- Ergonomic, easily accessible switches for simple closing
- Integrated BLUMOTION for soft and effortless closing action
- Diverse options, e.g. collision protection for corner solutions, synchronisation for wide, heavy fronts with several drive units
- Colour signals assist with start-up of the drive unit and the wireless switch

Product overview

Blum SERVO-DRIVE for AVENTOS HK top. Electrical motion support system for stay lifts. Ergonomic, easily accessible switches for closing. Switch with wireless connection (2.4 GHz) to drive unit. Certified for use worldwide. Integrated dampening. Stops immediately if there are obstacles. Full user control: the automatic motion can be interrupted at any time and/or the fronts can be operated manually without any restriction. Collision protection for corner solutions. Up to three drive units can be synchronised.

Straightforward, minimalist cover cap made of nylon in light grey, silk white or dark grey

- a) light grey
- b) silk white
- c) Dark grey

Guided start-up via colour signals on the drive unit and wireless switch. Simple tool-free cabling using piercing technology. Same cabling system also possible for opening support system in base cabinet (same transformer for wall cabinet and base cabinet). Also available as "SERVO DRIVE uno" individual application with 12-Watt Blum plug-in transformer.
