

TANDEMBOX sink pull-out

Optimal use of storage space under the sink

www.blum.com

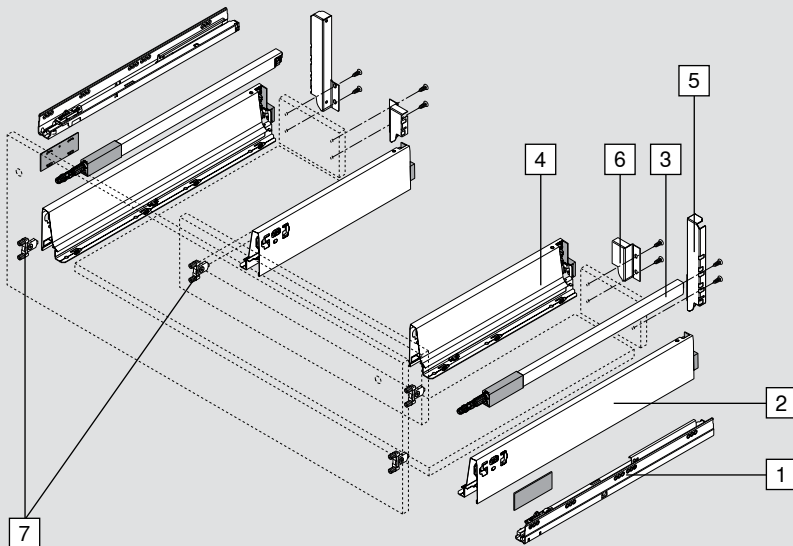

Memo

A U-shaped pull-out enables the best possible use of space to the left and right of the sink, meaning frequently used items such as sponges, washing-up liquid and tabs are close at hand but don't have to be stored on the work surface. Combined with the SERVO-DRIVE or TIP-ON BLUMOTION opening support system, the pull-out opens with just a light touch on the front. This is especially practical if both of your hands are full or wet. Thanks to BLUMOTION, it always closes silently and effortlessly.

The sink pull-out is available now for all TANDEMBOX programme lines with standard components in combination with the new chipboard back fixing.

Component overview

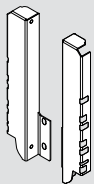

- 1 Cabinet profile
- 2 External drawer sides*
- 3 Longside gallery rail, left/right
- 4 Internal drawer sides*
- 5 External back fixing
- 6 Internal back fixing
- 7 Front fixing bracket

* NL external drawer side - NL internal drawer side = min. 150 (recommendation)

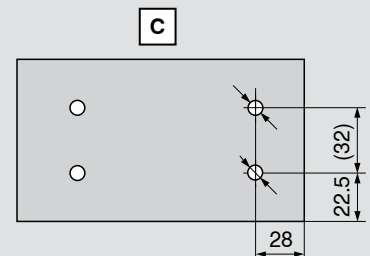

5 External back fixing

The Blum sink pull-out is compatible with the standard drawer sides, meaning that a special sink drawer side is no longer required.
