The right runner system for every requirement

MOVENTO

MOVENTO is a concealed runner system and the sophisticated solution for your wooden design ideas. The synchronised feather-light glide ensures an ultra-smooth running action. The 4-dimensional adjustment options provide you with a precise gap layout. What's more, the full extension excels in terms of high stability and load bearing capacity. MOVENTO can be used with all 4 motion technologies for soft and effortless opening and closing.

TANDEM

TANDEM is a concealed runner system and the versatile solution for your wooden design ideas. The extremely wide range of options offers great design flexibility. Choose from a broad selection of nominal lengths, various types of extension and load bearing classes as well as optional motion technologies for soft and effortless opening and closing. No matter which TANDEM version you opt for, you will provide your customers with stability and a feather-light glide that lasts for the life of the furniture.

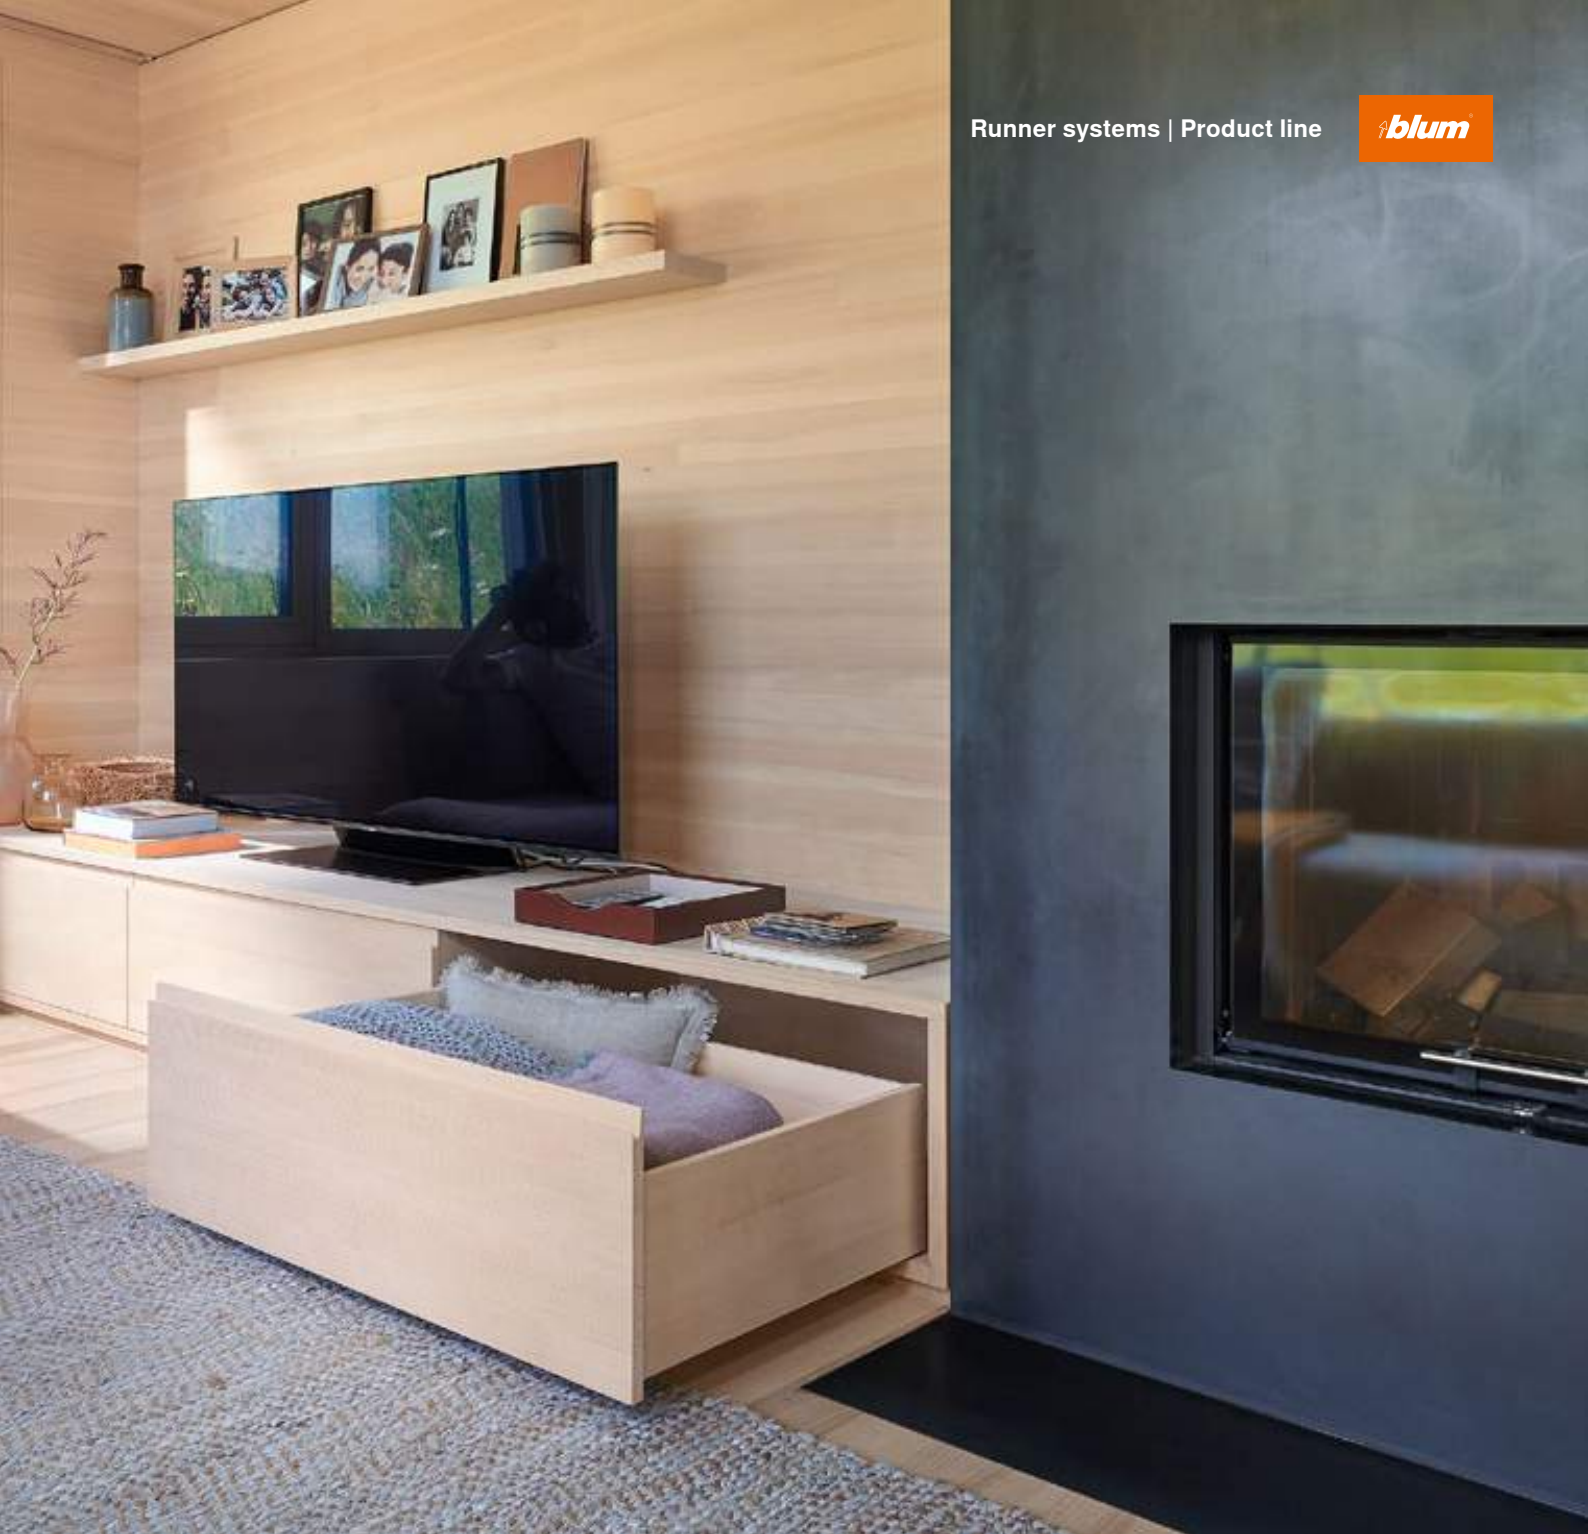

Design your pull-outs to suit different needs with TANDEM. The full extension is the right choice if you want easy access without any loss of storage space. And TANDEM single extension is ideal for smaller items of furniture, such as a bedside table.

Blum runner systems in use

Wooden drawers are all-rounders that are suitable for a wide variety of living areas. However, only Blum runner systems turn motion into a special experience. MOVENTO and TANDEM demonstrate their stability and load bearing capacity predominantly in the kitchen, where they have to withstand the rigours of everyday use. After all, this is where customers open and close pull-outs very often. However, they are also suitable for the bathroom, hallway, living room or bedroom. Regardless of where they are installed, our runner systems create a better quality of living.

MOVENTO in the living room

High-quality wooden furniture is very popular in living rooms. This is especially true when it not only looks nice, but also provides sufficient storage space. Be it wide or narrow, high or low, all kinds of drawers are possible with the MOVENTO runner system – from a lowboard for the TV through to a sideboard next to the dining table.

MOVENTO in the kitchen

Your customers open and close drawers again and again during everyday kitchen use. The MOVENTO runner system can handle these demands easily. Its stability and load bearing capacity make it ideal for wide and high pull-outs with heavy items, such as pots or pans. The 4-dimensional front adjustment options guarantee a precise gap layout.

TANDEM in the bathroom

Bathroom furniture needs to be well thought out. With the TANDEM range, you can even implement wide drawers with short nominal lengths thanks to our optional side stabiliser. Especially important in the bathroom: the zinc plated runners and nylon roller carriages offer the best protection against corrosion.

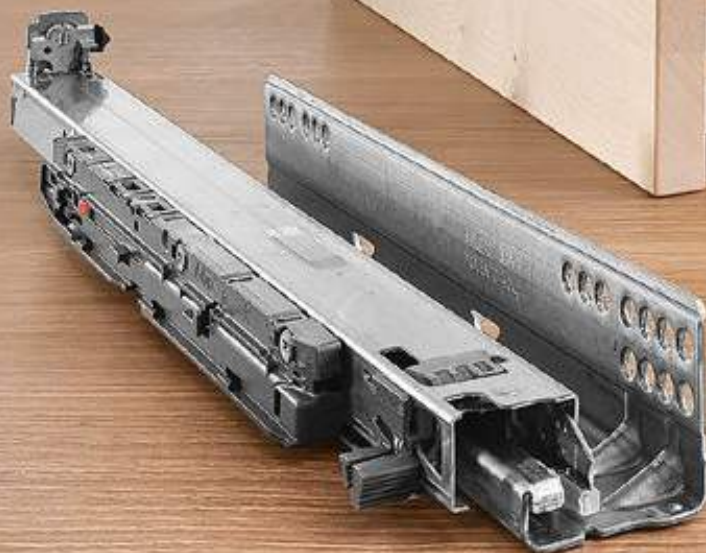

TANDEM in the hall

Sunglasses, keys and notebooks – hall furniture stores all kinds of small items. That's why furniture with small drawers is often all that's required here. But this does not mean that your customers will have to do without the ultra-light running action of TANDEM. The broad TANDEM range also includes short nominal lengths.

Versatile products for wooden drawers

Concealed runner systems with a broad selection of nominal lengths and load bearing classes from 30 to 70 kg. In the case of TANDEM, you also have two types of extension and two fixing methods to choose from. Our runner systems can be used with up to four motion technologies for soft and effortless opening and closing.

Greater quality of motion

Our runner systems excel in terms of running action. Their feather-light, quiet glide ensures enhanced ease of use. What is more, our products also boast high stability and reliable functionality. No matter which system you opt for, you will provide your customers with a better quality of living.

70 kg

For the life of the furniture

Our experts make sure that Blum quality is guaranteed. MOVENTO and TANDEM are designed to be opened and closed 100,000 times, 30,000 of which up to the stop. The low-friction cylindrical nylon rollers in the runners prevent metal wear. We place maximum emphasis on precision during manufacturing so that our runner systems delight for the lifetime of the furniture.
