

# Comprehensive range: Assembly devices from Blum

[www.blum.com](http://www.blum.com)

 **blum**<sup>®</sup>

Our assembly devices do not replace skilled craftsmanship. They don't finely tune your senses for the right materials. They do not instil creativity in you. You bring all this to the table yourself. Our assembly devices assist you by making some things easier to handle. By helping you find the right position for our fittings more quickly. By making holes easier to drill. By enabling you to assemble entire drawers more effectively. By aligning the front with even greater precision. And even by transforming your digitally planned project into reality in no time at all.

What's more, they offer you unimagined development potential by making your steps more efficient, by increasing your volumes, or by taking your projects to a whole new quality level. No matter what you plan for the future with your business, we want to walk this path with you.

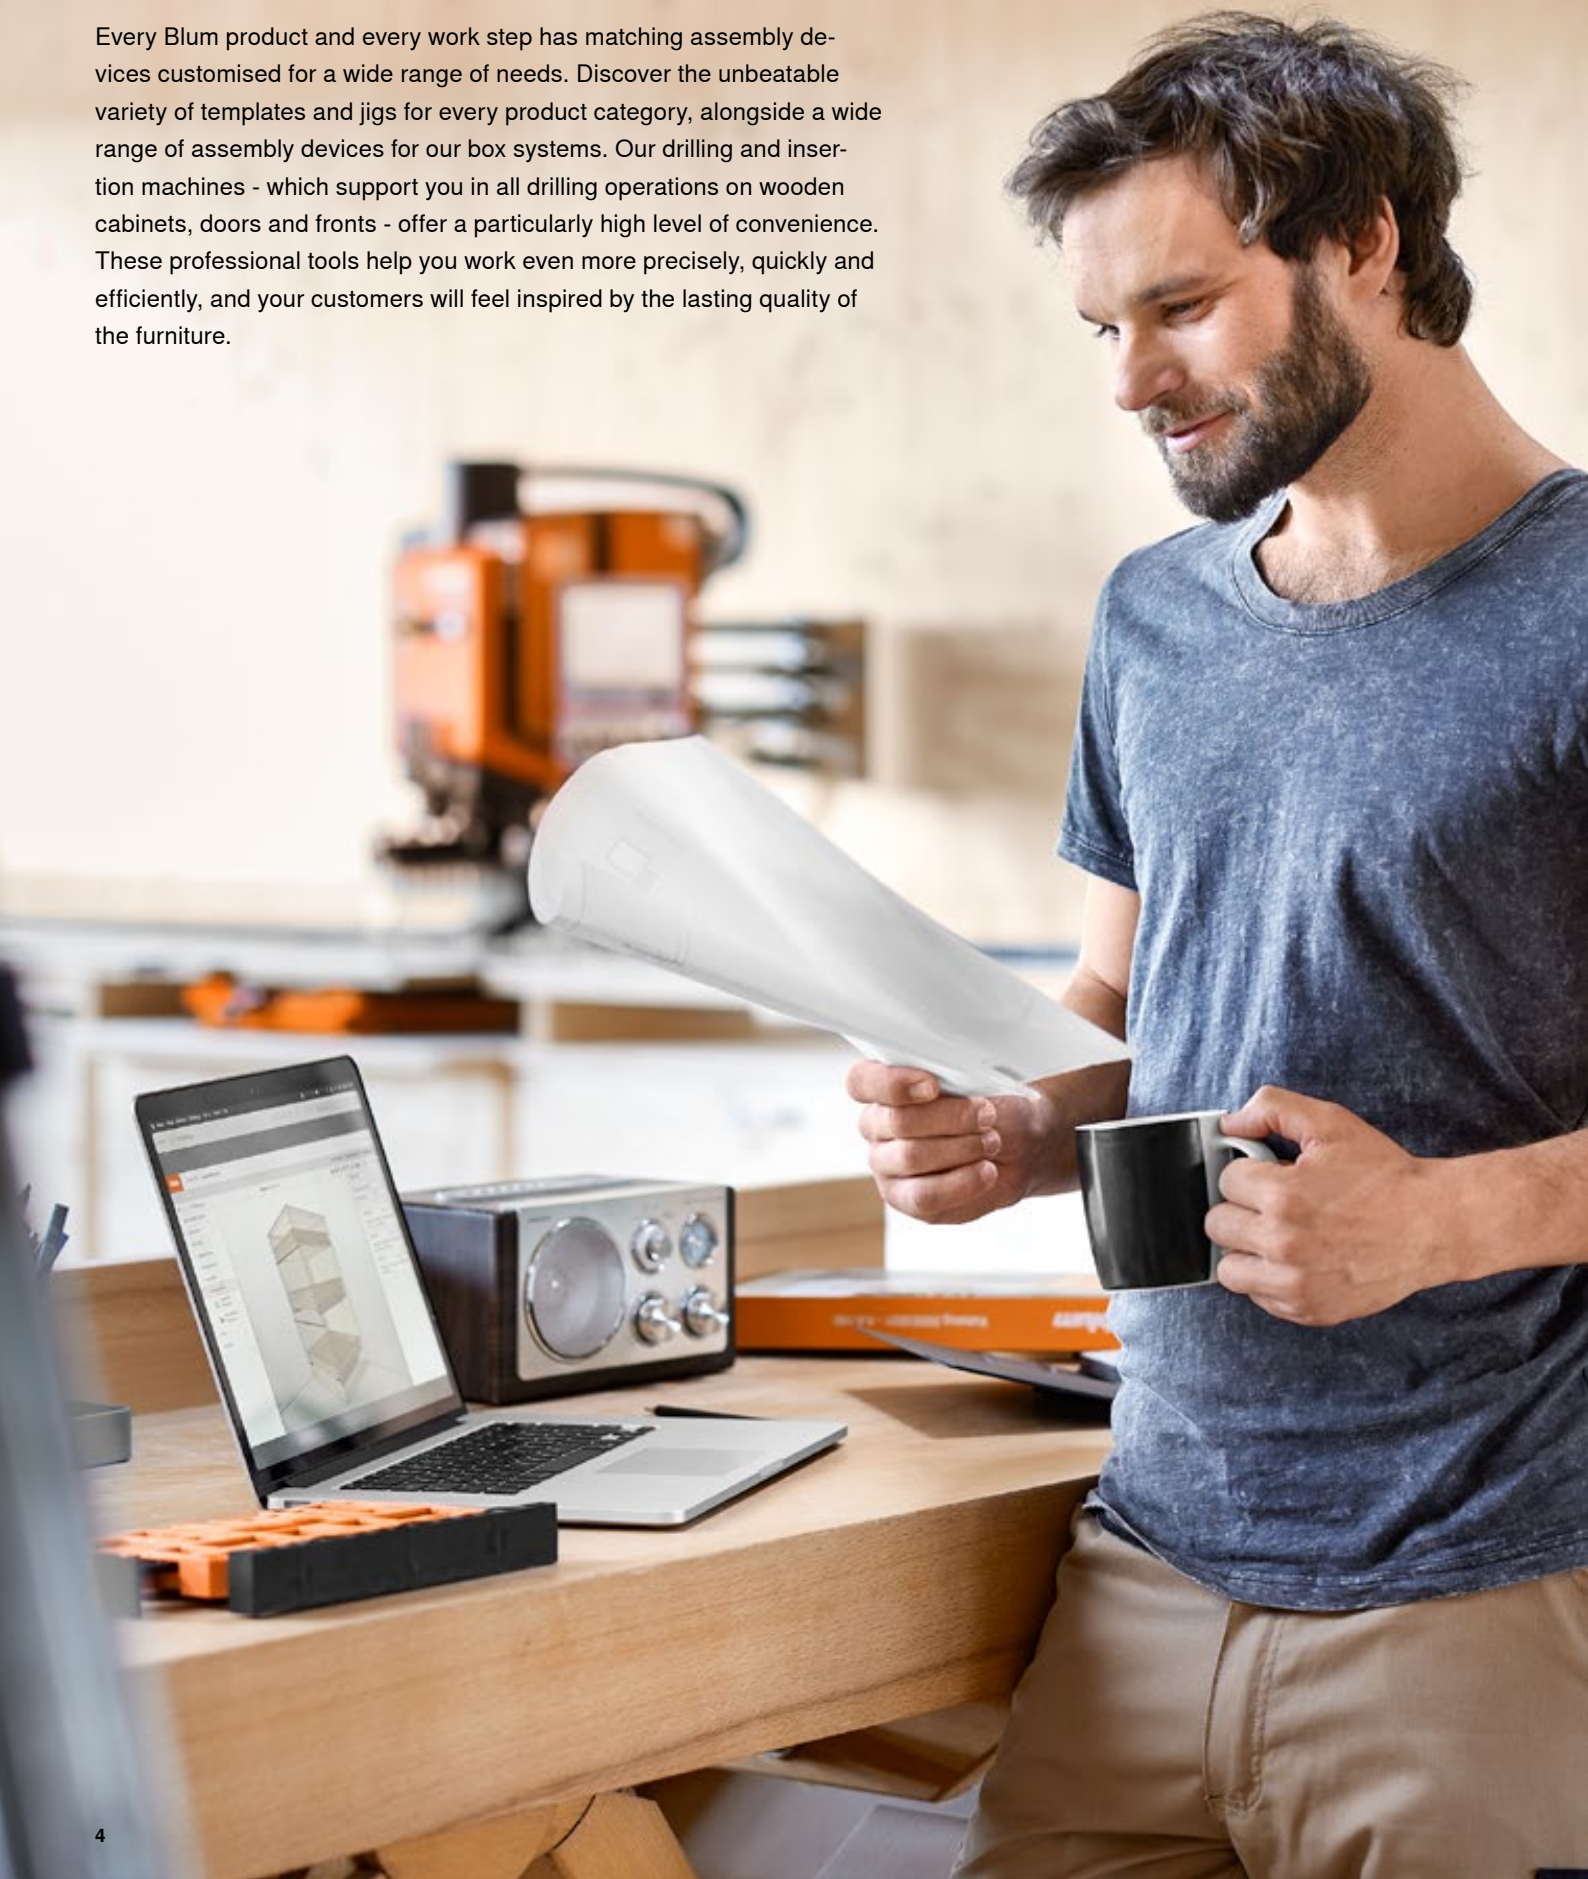

## Contents

- 04 The right assembly devices
- 06 Lift systems
- 16 Hinge systems
- 26 Box systems
- 42 Runner systems
- 52 Astonishingly simple
- 60 First-class efficiency
- 64 MINIPRESS top with EASYSTICK
- 66 Blum Services
- 68 moving ideas

# Everything and everyone taken into to consideration

Every Blum product and every work step has matching assembly devices customised for a wide range of needs. Discover the unbeatable variety of templates and jigs for every product category, alongside a wide range of assembly devices for our box systems. Our drilling and insertion machines - which support you in all drilling operations on wooden cabinets, doors and fronts - offer a particularly high level of convenience. These professional tools help you work even more precisely, quickly and efficiently, and your customers will feel inspired by the lasting quality of the furniture.

### Lift systems

AVENTOS lift systems deliver enhanced ease of use with tall and wall cabinets.

### Hinges

We supply you with the right Blum hinges in tried and tested quality for every furniture project.

### Box systems

Our box systems are perfectly suited for a wide range of requirements in furniture design.

### Runner systems

Our runner systems for wooden drawers offer the perfect solution for every aspiration.

# Assembly devices for lift systems

Our AVENTOS lift system fittings are highly versatile. Be it for fold up, swing up and over, lift up or stay lift systems, whether in wide or narrow design, visible or integrated - our lift systems are as diverse as your design ideas. We have developed assembly devices specifically to make AVENTOS assembly as easy as

possible for you. For each individual work step. The range extends from traditional templates to innovative drilling and insertion machines. We will be happy to advise you on the assembly devices best suited to your application.

Our assembly devices assist you in processes such as positioning and fastening the AVENTOS lift mechanism to the cabinet. Optimal alignment ensures that the fittings function perfectly, making opening and closing a pleasant experience for your customers.

Our range includes special assembly devices to help you attach fronts with ease and precision. Thanks to these tools, you will achieve fronts that close perfectly and a clean gap layout in no time. Make use of our mechanical and electrical motion technologies to deliver enhanced user convenience. We have the right tools for this too.

# Assembly devices for hinge systems

The furniture world is constantly changing - and placing new demands on you as a manufacturer. We are continuously developing our range, to ensure that you have the right hinge for every furniture project. Our assembly devices for hinge systems support you in fully realising the potential of CLIP top with integrated BLUMOTION

soft-close system, CLIP top and MODUL. The range of manual tools extends from drilling templates and gauge sets to insertion tools. You can perform all these steps even more precisely and efficiently, thanks to our professional but easy-to-use drilling and insertion machines.

Assembling and mounting our hinge systems is quick and easy, particularly if you are using our assembly devices to do so. When preparing the cabinet, for example, you can take care of marking and drilling in no time at all, allowing you to fit the doors precisely and effortlessly - while also saving time.

When it comes to mounting the fronts, we have further assembly devices in our range. These include our drilling templates for hinges, which ensure that the drilling positions on the front match those on the cabinet precisely. This results in hinges working perfectly – the doors close beautifully and the gap layout is flawless.

# Assembly devices for box systems

Which aspect is most important to you when it comes to drawers: a high degree of customisation, easy handling or a wide range of applications? We offer you three fully-fledged double-walled box systems to meet the most diverse requirements. Be it LEGRABOX, MERIVOBX or TANDEMBOX – assembly and mounting are very straightforward with our assembly devices.

From special drilling templates, marking templates and gauge sets, to assembly devices tailored to your needs – our range is full of practical aids. And if you have larger assembly volumes then we recommend our drilling and insertion machines.

Drilling the holes is a process that requires the utmost in precision. With our drilling templates, marking and pre-drilling the fixing positions for the cabinet profiles couldn't be easier. You'll have the components perfectly prepared for assembly in no time.

And we will of course support you in assembling the drawer too – we can provide a range of pneumatic and manual assembly devices for screws, prongs and nails – all of which deliver easy handling and effective setup. They allow you to assemble an entire box with just a few simple steps. And your customers will be delighted with precisely assembled drawers and the uniform gap layout of your furniture.

# Nail technology – the next generation of drawer assembly

# Nail technology: Why use nails instead of screws?

Quick and efficient manufacturing processes go a long way to success. That is why Blum always provides a suitable package of assembly devices to go with its fittings. Its offering is being extended all the time. The latest addition is the new BOXFIX plus assembly device with nail technology for Blum box systems.

### Efficient and convenient

- Easy assembly without pre-drilling
- Air nailer with integrated magazine makes light work of fixing components together
- No need to set stops thanks to pneumatic clamping
- Time savings of up to 40%

Two types of nails are available:  
Good-looking round head nails or practical rectangular-ones.

### Quality

The nails are driven through the metal directly into the chipboard back and drawer base. This creates a flush seamless joint between the fittings and wooden parts.

Discover the benefits:

# Assembly devices for runner systems

Our runner systems give you quality steel for your design ideas with wood. We have a solution for every requirement and specification: the versatile TANDEM and the sophisticated MOVENTO runner system. And they are mounted quickly and easily – thanks to our special assembly devices. You have the choice be-

tween our handy mobile templates and jigs and particularly efficient and convenient assembly with our drilling and insertion machines. We will be happy to advise you on the tools best suited to your application.

To ensure the feather-light glide of our runner systems, it is important to drill the holes in the cabinet precisely and evenly. You can do this with ease thanks to the suitable drilling templates and gauge sets in our product range, which are also ideal for use with our motion technologies for soft and effortless opening and closing.

Pre-drilling allows fittings to be set even more precisely. This is particularly useful for wood and therefore also for fixing the runner profile to the drawer. You can determine the exact drilling position particularly efficiently using our drilling templates. And your work will be even easier with MINIPRESS top. If your drawers are correctly positioned on the runner profile, their feather-light glide is guaranteed.

# Astonishingly simple

## **Assembly devices for mobile use**

Are flexibility, cost efficiency and rapid readiness for use a must for you - both in your workshop and at the customer's site? Then our manual assembly devices are the perfect choice for you. Our wide range of templates, jigs and assembly devices will dependably support you in every step of your work.

Incredibly simple and infinitely scalable

# Realise your full potential

## Process optimisation

Do you want to maintain your high quality standards in manufacturing, but increase your efficiency? Our highly professional machines enable you to optimise your processes so that your business remains profitable in the long term. We also support you with an extensive range of complementary services – from planning to marketing.

Incredibly simple and infinitely scalable

## All set for the future

### **Mechanical and digital assembly devices**

Are you planning to expand your joinery and enhance your performance? Our drilling and insertion machines are the perfect solution for everyday assembly situations. And when it comes to digital applications too: either plan directly at the machine, transfer data from the Cabinet Configurator, or from your CAD software.

# Infinitely scalable

## Programmed for sustainable growth

Do you already have a large-scale business with a high order volume – but you're looking for further growth? Our assembly devices and services will support you in further increasing your high production quality, while also streamlining your processes, so that you can achieve maximum efficiency even with complex large-scale projects and deliver to your customers fast.

**First-class  
efficiency**

Modern furniture is demanding increasingly complex fittings solutions. Our special drills and assembly devices ensure that our products remain very easy to assemble despite their increasing sophistication. At Blum, we support you with assembly devices as well as personal and digital services. Be it MINIPRESS top,

MINIPRESS P with EASYSTICK or BOXFIX plus – with our machines you'll achieve top quality and maximum efficiency; from the assembly of high volumes down to small production series, your work will be effortless. Think big when planning your furniture – and grow with our product innovations!

## Your possibilities are now limitless

### MINIPRESS top

MINIPRESS top delivers top-quality work results fast. Our innovative drilling and insertion machine is perfect for all vertical and optionally horizontal drilling on cabinets, doors and fronts. It works efficiently and precisely, is convenient to set up without tools and easy to oper-

ate - with no requirement for skilled personnel. When equipped with EASYSTICK, it is the perfect assistant – and in combination with the Cabinet Configurator, planning and assembly are easier than ever.

### MINIPRESS P

With our specialist MINIPRESS P, drilling patterns and fittings are set in place quickly and easily thanks to the pneumatic feed. And once set, you can perform frequently recurring work steps with efficiency and precision. MINIPRESS P can also be upgraded with EASYSTICK to approach stop positions automatically.

### BOXFIX plus

The BOXFIX plus assembly device is suitable for the pneumatic assembly of all our box systems. Two assembly options are available: you can either screw all the required parts together or perform convenient assembly with nail technology which facilitates error-free alignment of drawer side to base, even faster and with added assurance.

### **MINIPRESS top with EASYSTICK**

Work becomes easier than ever in combination with EASYSTICK – you transfer the detailed, comprehensive planning data from your CAD software or our Cabinet Configurator, and then transfer the complete planning results to the EASYSTICK computer via WLAN or USB stick. The ruler moves to the stop position on the X axis and the vertical drilling unit moves to the position on the Y axis automatically for each drilling operation.

**Your key to  
greater efficiency**

## Blum services

Our services are precisely tailored to your needs along every step of your process chain, allowing you to work more efficiently and thereby saving time. Customised for you, available whenever and wherever you need them.

### Digital services

Digital support for greater efficiency

### Assembly devices

Practical tools for precise work

### Communication services

Comprehensive material for targeted marketing

### Personal services

Direct contact for customer-focused support

### Logistics services

Optimised processes for fast delivery

# moving ideas

We believe that ideas can move the world. We offer innovative fittings, inspiring furniture concepts and appropriate services so that you can turn your creative ideas into reality. We are driven by your needs, international trends and our shared vision of a better quality of living. Let us work together to create moving ideas.

## Quality of living

We would like you to enjoy greater convenience and functionality when using furniture.

## Product range

Everything from a single source: our wide range of products allows you to keep up with today's and tomorrow's trends.

## Inspiration

We monitor global trends and strive to create the solutions of tomorrow. We like to share our insights with you.

## Innovation

We stay in motion. Curiosity and pioneering spirit drive us to develop new products and services for you.

## Services

We support your daily operations with customised services tailored to your processes.

## Quality

We continuously strive to improve our products, services and ourselves.

## Trust

We take responsibility for partnerships, our employees, society and the environment.

Julius Blum started our journey in 1952 with horseshoe studs. Today we supply innovative fittings to customers in over 120 countries.
